## DETAILED ACTION

Claims 1-24 are pending in the instant application and are subject to the following lack of unity requirement.

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 10-18, drawn to a cosmetic process comprising the topical application of a composition comprising at least one N-hydroxy imide as defined in any of Claims 3 to 9.

Group II, claims 19-24, drawn to compounds and compositions of general formula (II).

Claims 1-9, drawn to subject matter that is non-statutory under 35 USC 101 (i.e., the claims are drawn to *the use* of at least one compound but since the claims do not set forth any steps involved in the method/process, it is unclear what method/process Applicant is intending to encompass) and can not be examined as written. **Claims 1-9 will be added to a new group or a preexisting group upon amendment to recite statutory subject matter as appropriate.**

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking the claims is a compound of general formula (II). Prior art exists which causes the core structure in the current application to lack a special technical feature. The core structure here is: the structure of general formula (II) wherein the phenyl is unsubstituted. This structure has been seen in previous patents and papers. For example, Skinner et al. (Journal of the American Chemical Society, 1942, 64, pages 2600-2601) discloses 3-(4-bromophenyl)-1-hydroxy-1H-Pyrrole-2,5-dione which contains this core structure. Therefore, the feature linking the claims does not constitute a special technical feature as defined by PCT Rule 13.2 as it does not define a contribution over the art.

Accordingly, Groups I and II are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept. Therefore, unity of invention is considered to be lacking and restriction of the invention in accordance with the rules of unity of invention is considered to be proper.

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to

be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
